Process Engineering

Move fast. **Know it will hold**.

How R&D changes and recovers at scale: fast, risk managed, outcomes predictable. ODC and O11, all of R&D.

Vera Branco

At that ratio, **trust** is the operating model.

1. **Enabling, never gatekeeping**
   Metrics and compliance are diagnostics — they show where the system strains.

2. **Accountable autonomy**
   Flexibility with guidance — you know what is expected, and you own the outcome.

3. **Outcomes over activities**
   We challenge the value of our own work. What stays makes the system hold.

Process Engineering

Two strong shores don’t make a **bridge**.

Nobody here works alone. The **hard part is alignment,** not ownership.

Build the bridge, make it hold

Process Engineering

The **one thing** to remember.

We own the **space between the teams**

You own your shore — your operations, your tools, your decisions. We **build the crossing**, and **whether it holds** is ours.
