It seems that the “natural” version to rollback to (the last one soaked in the same ring), 1.0.492, is within the range of defective versions, thus not an option. I’ve requested the actual version to rollback to to be explicitly stated in the RFC, this is a must-have to avoid misuse of the RFC, like rolling back to an arbitrary, non-reviewed, version.

Another thing to notice is that the poisonous version was deployed in the ring in 2026-01-22 11:16:33, so it seems we were not able to perceive the issue for almost a week. If we consider OSALL ring as well, it’s 2026-01-20 14:21:49 there.

It was also agreed that OSALL will not be reverted: a new version will be pushed instead.
