Request memory dumps from specific customer application

Key details

General | CAB Review | Maintenance & Operations

Special Procedure Guidelines

PLEASE DO NOT CLONE REQUESTS FOR CHANGE - if you do it, automations will not be triggered and wrong information from the origin RFC will be replicated wrongly to the new RFC.

Change risk	Low
Change Category	Add option

Description

Apps from our customer, Entel, are currently scaled to the max number of replicas (16) allowed in the ODC infrastructure. The replicas have an average memory usage above the scale down target defined on HPA, even when idle, so the app is not scaling down as expected.

A memory dump was already obtained previously, but more information is necessary, ideally from replicas with a long up time (19+ hours). If there are no replicas old enough for this app, we should postpone for the next day and re-evaluate.

For this, we will need to collect 3 memory dumps from replicas of the application. Collection of the memory dump should be done outside the customer's working hours, ideally between 9am and 12pm UTC+1 (3 hour window).

Catalog Article / Runbook	https://outsystemsrd.atlassian.net/wiki/spaces/RDRC/
Downtime Expected	Yes
Affected Services (list)	Application Runtime
Impacted Asset(s)	Add options
Specify Missing Asset	Add text
