Create SRE-managed Static Secrets for wiz-sensor (negative rigns)

By Diogo Fernandes 1 min 5 Add a reaction

Summary

Wiz Sensor is a Kubernetes security agent that runs on every node to scan workloads, detect vulnerabilities, monitor runtime behavior, and ensure compliance with security policies.

In order to deploy **Wiz Sensor** on the negative rings the GRS team needs SRE to create the bellow list of secrets in the SRE parameter store. We can't use Secrets Store CSI driver because the Wiz Sensor doesn't currently support it.

General Information

Change Type	Normal
Change Risk	Low
Downtime Involved	No
Rollback Available	Yes
Implementation Team	GRS & SRE

Implementation Plan

Get the value of clientId and clientToken from -3 ngs cluster (**ngs-dev-us-east-1-01**).

```
# make sure you are connected to ngs-dev-us-east-1-01
>> neoctl config use-kubeconfig minus3 ngs

# get clientId
>> kubectl get secret wiz-sensor-apikey -n wiz -o jsonpath='{.dat

# get clientToken
>> kubectl get secret wiz-sensor-apikey -n wiz -o jsonpath='{.dat
```

Then create the Secrets in SRE Parameter store.

	Product line	Done?
arn:aws:ssm:us-east-1:761126061413:parameter/ring/dev/wiz-sensor-apikey-client-id	commercial	✅
arn:aws:ssm:us-east-1:761126061413:parameter/ring/dev/wiz-sensor-apikey-client-token	commercial	✅
arn:aws:ssm:us-east-1:761126061413:parameter/ring/test/wiz-sensor-apikey-client-id	commercial	✅

eter/ring/test/wiz-sensor-apikey-client-token		
arn:aws:ssm:us-east-1:761126061413:parameter/ring/stage/wiz-sensor-apikey-client-id	commercial	✅
arn:aws:ssm:us-east-1:761126061413:parameter/ring/stage/wiz-sensor-apikey-client-token	commercial	✅

Testing and Validation Plan

Validate that the parameters are created.

Rollback Plan

Delete the parameters out of the AWS parameter store if needed.
