[Normal] Gain PowerUser on DEV Management Stamp only to Perform POC Cleanup

By Chris Carter 1 min 3 Add a reaction

1. Summary

As apart of a POC we installed an Agent on Dev - Management Stamp manually, before the stamp was locked down. Now we want to remove the unused agent.

2. General Information

Change Type	Normal
Change Risk	Low
Downtime Involved	no
Rollback Available	no
Implementation Team	Observability
Component(s)/Asset(s)	Chronosphere Agent
Impact Description	Only in DEV Management stamp

3. Prerequisites

Ensure dev management stamp has the chronosphere collector running as a deployment in the kube-prometheus namespace.

Observability to request access to DEV Mananagent stamp via Portal and Release Engineering will approve with this change catalog.

1. Using the following Query we can detect the stamps with the install of Chronosphere Deployment and Daemonset. https://outsystems.grafana.net/goto/lWVWrXTHg?orgId=1
2. Commands to run:
   a. kubectl delete deployment chronocollector-deployment -n kube-prometheus
   b. kubectl delete daemonset chronocollector-daemonset -n kube-prometheus

5. Post Implementation

1. Review the pods in kube-prometheus and ensure none are for Chronosphere.y.
