Special Procedure Guidelines

PLEASE DO NOT CLONE REQUESTS FOR CHANGE - if you do it, automations will not be triggered and wrong information from the origin RFC will be replicated wrongly to the new RFC.

Change risk: Low

Change Category: Add option

Description

With RFC RFC-1137: Increase Customer Production Database Limits COMPLETED , the database compute limits for the customer production database has been increased, to temporarily unblock the customer's production environment while the applicational issues were improved or license expansion was agreed.

Since then, the license for this customer has been updated in order to reflect this scale up on the limit and currently matches the override that was originally set. As such, we can now fully clean up this override and ensure that the license value is always respected.

For this current RFC, we want to only execute the ***Post Implementation*** plan as described on the catalog article: [Normal] Override Runtime Database limits ACU | 5. Post Implementation

- It is only necessary to remove the override on `max-acu` since that was the only one applied on the database
  - ```
    kubectl annotate Environment <environment_key> http://runtimedb.ou
    ```

Inputs for execution:

- Ring: ga
- Stamp (rundev, runnp or runp): runp
- Region: ap-southeast-1
- Environment key: d0c3e7f9-5de9-4090-a422-2cdf0e1e84ec
