ICE | Change - Fix nats2avativa replicas

By Adonis Dutra 1 min 3 Add a reaction

This Change is part of the Change Catalog ICE.

1. Summary

Currently, we have identified on runnp-ga-me-ce-1-01 that the nat2avatica deployment has zero replicas. RDICE-4485

Compared to other stamps, it seems wrong. We have to re-establish the nats2avativa.

We guess that when the stamp was deployed months ago, 2024-09-26, we may have set the replicas to 0.

We have tried using helm release reconcile to force the redeploy and didn't change the replicas count. RFC-2984

2. General Information

Change Type	Normal
Change Risk	Low
Downtime Involved	No
Rollback Available	yes
Implementation Team	ICE

3. Pre-requisites

Inputs for execution

Stamp: runnp-ga-me-ce-1-01

Namespace: runtime-services

Deployment: outsystems-nats2avatica-service

Replicas: 2

Technical requirements

access to the cluster

Communication

not needed

Expected duration

- 5min

4. Implementation Plan

Implementation actions

- Connect to the cluster
- Run `kubectl scale deployment -n runtime-services outsystems-nats2avatica-service --replicas=2`

Testing and validation plan

1. Check if the pods are ready.

```
nats2avatica-service --replicas=0
```

5. Post Implementation

N/A

6. Other

N/A

7. Useful links/Related articles

N/A
