By Patrícia Sobreira 5 min 7 Add a reaction

Lead by: @Patrícia Sobreira

Notes: @Pedro Saraiva

Participants:

- @Francisco Oliveira
- @Guilherme Bacalhau
- @Nuno Parreira
- @Patrícia Sobreira
- @André Vieira
- @Paulo Alves
- @Jon Branch
- @Louise Perold

SLOs

GA SLOs [Log in to Nobl9 first on MyApps]:

Service	SLO	OSALL	EA	GA	Notes
System-Wide	User Auth	OK	OK	OK	
Dev-Specific	Identity Core	OK	OK	OK	
	Keycloak	OK	OK	OK	
	Claims Agent Service	OK	OK	OK	
	Identity Business Service	OK	OK	OK	
	Identity Business Backend	OK	OK	NOK	 Looking at the metrics, we can see that we had some errors on Sep 03, because a customer was trying to add an invalid email, we have already improved the input validation, to not throw a 500 error. Then 2 errors on Sep 09, and then we have a lot of gaps on

					This was already discussed with SRE and Nobl9, and we will have to change all our SLOs to incremental to avoid this.  ☑ @Patrícia Sobreira and @Guilherme Bacalhau to create tasks for the team to improve SLOs and change them to *incremental*.  *ONE Madness* 🙂 Platform Core changes to call CAS to get name and email without CAS being ready for the PIM Process. We'v rollback the Platform Core version to solve this.
Application Runtime (NATS)		NOK	NOK	NOK	There are several graphs that need attention. Like I explained last week, this was related to a change in the runtime metrics, explained here `https://outsystems.slack.com/archives/C013ZRU697D/p1756455692657289` . Since they haven't "replayed" the SLOs to fix the issue, it will only be solved when those errors disappear from the rolling window. There are some regions (ngs-ga-ap-se-1-01, ngs-ga-eu-ce-1-01, ngs-ga-us-east-1-01) that are no still fully recovered is about this: `https://outsystemsrd.atlassian.net/browse/RFC-3532`

Dashboard

Test	Date	Concurrent Users	Throughput
Refresh Tokens	Sep 20, 2025	113398	**6.86K req/s**
Full Logins	Sep 3, 2025	27915	**1.55K req/s**

- [x] @João Matos to explain why we're running the tests with less VUs compared to before and if we run with the same load can we go to 200k? What is the cadence of when we repeat the tests to guarantee the 200k.

Keycloak Dashboard

Test	Date	Max login rate	Max Authenticated Sessions rate	
Keycloak Login Rate → Refresh Tokens	Sep 20, 2025	**120 req/s**	**624 rec/s**	
Keycloak Login Rate → Full Logins	Sep 3, 2025	**121 req/s**	**124 rec/s**	
RFCs, Incidents and Bugs

Check the latest metrics on RFCs, Incidents, and Bugs.

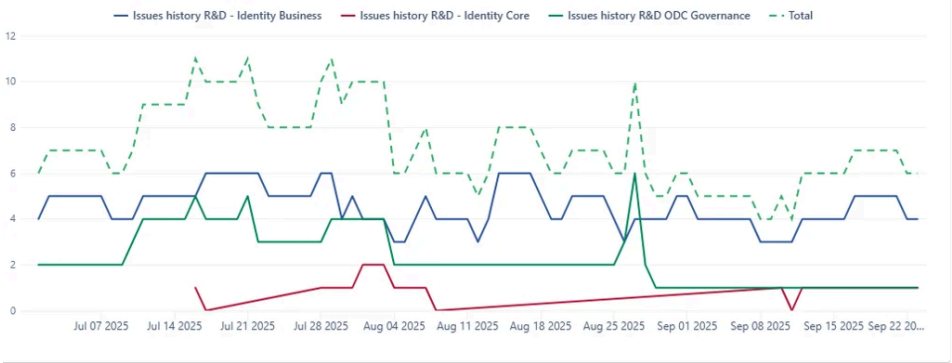
1. RFCs Board
   - https://outsystemsrd.atlassian.net/browse/RFC-3347 - was in approved by CAB → moved to completed
   - https://outsystemsrd.atlassian.net/browse/RFC-3426 → moved to completed
   -
     - [x] @Guilherme Bacalhau to find out what to do with https://outsystemsrd.atlassian.net/browse/RFC-2672 Completed or Canceled?
2. Incidents & Problems
   - **Ongoing Customer Reported Incidents:** No high incidents open
   - **Customer Reported Incidents Solved (Past 15 Days)**
     - https://outsystemsrd.atlassian.net/browse/RDINC-49809
     - https://outsystemsrd.atlassian.net/browse/RDINC-53480
   - **Ongoing Ring Transition Incidents**: No open in positive rings
   - **Identity - System wide SLO Incidents - last 2 weeks:** 2 high
     - https://outsystemsrd.atlassian.net/browse/RDINC-53112 - caused by a customer doing performance tests.
     - https://outsystemsrd.atlassian.net/browse/RDINC-52911 - caused by a customer doing performance tests.

are taking care of that (mitigation and full resolution)

- **Post Mortem Pending Completion:** 9 incidents
- **Ongoing Problems**
  - https://outsystemsrd.atlassian.net/browse/RPM-5682
  - https://outsystemsrd.atlassian.net/browse/RPM-6037
  - https://outsystemsrd.atlassian.net/browse/RPM-5746
  - https://outsystemsrd.atlassian.net/browse/RPM-5618
  - https://outsystemsrd.atlassian.net/browse/RPM-6009
  - https://outsystemsrd.atlassian.net/browse/RPM-5981
  - https://outsystemsrd.atlassian.net/browse/RPM-5692

3. Pending Action Items from Changes and Incidents
   - **Expired dates**
     - https://outsystemsrd.atlassian.net/browse/QACICT-664
   - **Next dates**
     - https://outsystemsrd.atlassian.net/browse/RDPIDT-3224
     - https://outsystemsrd.atlassian.net/browse/RDPIB-2611
     - https://outsystemsrd.atlassian.net/browse/RDPEN-1294
   - **Missing dates**
     - https://outsystemsrd.atlassian.net/browse/RPOR-21523
     - https://outsystemsrd.atlassian.net/browse/RPOR-21525
4. Pending Action Items from Problems
   - **Expired dates**
     - https://outsystemsrd.atlassian.net/browse/VUL-747
     - https://outsystemsrd.atlassian.net/browse/VUL-616
   - **Next dates**
     - https://outsystemsrd.atlassian.net/browse/RDPIDT-3138
   - **Missing dates**
     - https://outsystemsrd.atlassian.net/browse/RPOR-9391
     - [x] @Nuno Parreira to check due date for https://outsystemsrd.atlassian.net/browse/RPLAT-3454
     - [x] @Nuno Parreira to check due date for https://outsystemsrd.atlassian.net/browse/RDMOR-2407
5. Bugs
   - **Issues created in prod**
     - https://outsystemsrd.atlassian.net/browse/RDPIDT-3224 (A high error rate in our Keycloak service triggered an alert due to a recent update that caused the `tenantId` attribute to go missing from the realm specifications. We are building a worker that will use the Keycloak Admin API to automatically add the missing attribute.)

Updated Nov 18, 2025 Edit



-
  - The only high bug is already releasing

6. Deployment Unit Metrics
   - 
   -

7. CSAT (Portal)

Release Notes

Check release notes for issues updated in the latest 7 days to make sure they are correct.

Service Readiness Checklist

https://outsystemsrd.atlassian.net/wiki/spaces/RDIVS/pages/4724263963

https://outsystemsrd.atlassian.net/wiki/spaces/RDIVS/pages/4791664641

Action items

- [x] @Francisco Oliveira to check our current strategy regarding alerts (Grafana + Nobl9). Which ones to pick? Do we have alerts to all SLOs triggering the teams?
- [x] @Nuno Parreira to understand what is done when a customer requests to do performance tests. Example: https://outsystemsrd.atlassian.net/browse/RDINC-53112 https://outsystemsrd.atlassian.net/browse/RDINC-52911
- [x] @Nuno Parreira to give permissions on all filters
- [x] @Patrícia Sobreira and @Guilherme Bacalhau to review problems associated with their teams to check if they can be closed or if there are problems without any linked issues targeted to their resolution.
- [x] @Pedro Saraiva MTSI delete users. What was done to move this to the teams that own that flow?
