Description

On September 20th, we raised an emergency (RFC-3524) to manually change the annotations the CR of the Environment 0c728bab-2fb2-4608-8d17-f6b07b0dd676, in order to upgrade the Max ACUs of its database.

This change was necessary because after Support triggered the change on Digital Provisioning portal the change was queued and took more time than expected due to size of the queue, related to the 15k Provisioning Journey. A lot of Tenants were scheduled to be created, causing for this requested to be very delayed.

This RFC is to rollback the changes of the executed, as a post implementation step.

Action Plan:

Variables

Ring: GA
Stamp: runp
Region: eu-central-1
Environment key: 0c728bab-2fb2-4608-8d17-f6b07b0dd676

Connect to the cluster using
neoctl config use-kubeconfig plus3 runp --region eu-central-1

Execute the following command
kubectl annotate Environment 0c728bab-2fb2-4608-8d17-f6b07b0dd676
runtimedb.outsystemscloud.com/max-acu-
