[Normal] Enable redirect to appgenerator in mentor on ODC Portal for test tenants

By Carlos Freitas 1 min 3 Add a reaction

1. Summary

The feature toggles in Launch Darkly allow the teams to enable a specific part of the code/feature remotely at a given moment, making these changes available for the affected customers/rings/geos.

In the context of this RFC, we want to enable the redirect to appgenerator on mentor for ODC Portal for test tenants OutSystems Tenant of Digital Applications (f4248c7c-5784-4166-a25f-acf30b9b652e) and OutSystems Digital Integrations ODC (ffbd860e-d0c2-400b-90b2-64d23e3f912a).

2. General Information

Change Type	*Normal*
Change Risk	*Low*
Downtime Involved	*No*
Rollback Available	*Yes*
Implementation Team	*ALM Consoles*
Component(s)/Asset(s)	*Apps console*
Impact Description	*No impact anticipated*

Inputs for execution

- Launch Darkly project: `unified-experience`
- Project's environment: `Production`
- Feature toggle identifier: `TG_Apps_AppGenerator_MentorLink`
- Enable conditions: By tenant
  - **OutSystems Tenant of Digital Applications** - f4248c7c-5784-4166-a25f-acf30b9b652e
  - **OutSystems Digital Integrations ODC** - ffbd860e-d0c2-400b-90b2-64d23e3f912a

Technical requirements

- *Access to Launch Darkly project and environment identified in the inputs section*

Communication

- *Notify the team via RFC comment or Slack Channel*

Expected duration

N/A

4. Implementation Plan

Implementation actions

1. Go to the feature toggle page in Launch Darkly:
   a. https://app.launchdarkly.com/projects/unified-experience/flags/TG_Apps_AppGenerator_MentorLink/targeting?env=production&selected-env=production
2. Enable targeting rules, if disabled
3. Add a new custom rule or edit an existing rule, if it already exists
4. Add/edit rule for a specific tenant
   a. Description: *Test tenants*
   b. Context kind: user

   e. Values: (include the TenantId listed above)
5. Change the default rule to False

Testing and validation plan

Testing of these capabilities, hidden behind a feature toggle, should occur during the pipeline execution, which should test the asset both with and without the new capability.

Optionally, there can be manual validation performed by the owner team to confirm that the feature is already enabled as per the specified conditions.

Rollback plan

1. Go to the feature toggle page in Launch Darkly:
   a. https://app.launchdarkly.com/projects/unified-experience/flags/TG_Apps_AppGenerator_MentorLink/targeting?env=production&selected-env=production
2. Revert the steps executed in the implementation plan, which can include:
   a. Disable the targeting rules
   b. Remove the whole rule that was added
   c. Remove the added values: TenantId for existing rules

5. Post Implementation

N/A

6. Other

N/A
